(Pocket-lint) - Google Drive has been around for years, but has changed relatively little since its launch; However, Google recently switched up price plans for the service, giving them its own brand (Google One) and it's bundling some nice-to-haves like live expert support and subscriber perks. Here's what you need to know about Google Drive and Google One.

Google Drive is Google Cloud Storage Services for Consumers and G Suite customers (businesses and schools). For consumers it's a free way to keep your backup files in the cloud and are easily accessible from any device. You need a Google account to use Google Drive and, for starters, Google gives you 15GB of memory for free, so you can safely store photos, stories, drawings, recordings, videos, anything really. Best of all, Google Drive is encrypted using SSL, the same security protocol used on Gmail and other Google services. Here are the key features of Google Drive for Consumers: Store Files: Drive starts you off with 15GB of free online storage. You can store a wide range of files and folders - even Office files. File Creation: You can create documents and files on the fly with integrated documents, sheets, and slides of apps. Access files from anywhere: Your Drive files can be obtained from any smartphone, tablet or computer. Share with others: You can quickly invite others to browse, download and comment and collaborate with files in Drive. Work offline: If you are not connected to the Internet, you can make some files available offline for viewing and editing (see here). See the old versions: You can look back as far as 30 days on most types of files, making it easy to see the changes and go back to previous versions. Search: Drive can recognize objects in images and text in scanned documents - just enter the keyword in the search bar. Google Photos: You can store your photos in Drive and then access them and edit them with Google Photos. Scan documents: Android app lets you scan all paper documents like PDF - just snap a photo of it. Save Gmail attachments: Hover over your Gmail attachment and look for the Drive logo to save any attachment to the Drive. Drive app: You can do everything from editing a profile picture to creating a map of mind with more than 100 integrated apps. Google First, create or log into your Google account. Then, if you're a consumer, do the following: Go to [drive.google.com](https://drive.google.com). You'll see My Drive that has your files and folders you've downloaded or synced, including any Google Docs, Google Sheets, Google Slides, and Google Forms you've created. If you don't see the files in the drive, then go ahead and download the files with computer (see, as here) or create files in the Disk (see here). You can even work with Microsoft Office files in Drive (see here). Then you can share your files or folders in Drive (see, both here and here, respectively), so that other people can view, edit or comment on them. Find and open on Android Drive app. You'll see My Drive that has your files and folders you've downloaded or synced, including any Google Docs, Google Sheets, Google Slides, and Google Forms you've created. If you don't see the files in the disk, then go ahead and download the files from your computer (see here) or create files in the Drive (see here). You can even work with Microsoft Office files in Drive (see here). Then you can share your files or folders in Drive (see, both here and here, respectively), so that other people can view, edit or comment on them. Open the Google Drive app on your iPhone or iPad. You'll see My Drive that has your files and folders you've downloaded or synced, including any Google Docs, Google Sheets, Google Slides, and Google Forms you've created. If you don't see the files in the disk, then go ahead and download the files from your computer (see here) or create files in the Drive (see here). You can even work with Microsoft Office files in Drive (see here). Then you can share your files or folders in Drive (see, both here and here, respectively), so that other people can view, edit or comment on them. Google offers a backup and synchronization tool for consumers. You can download and use it on Your Windows or Mac to easily download and store files from any folder on your computer, camera and SD cards. You can also use it to find your content on any phone, tablet or computer using Google Drive, as well as your photos and videos in Google Photos. Google offers a similar tool, Drive File Stream, G Suite customers. Here are the main features of backup and synchronization: view and view files from [drive.google.com](https://drive.google.com) in the Google Drive folder on your computer. Open, organize, and change any of your files. Any changes made to the files will be synchronized everywhere. All Google Drive storage plans now called Google One's "Family Plan" includes up to five members of the Google family to rework their consumer Google Drive storage plans. Google now calls google plans Google One. The cloud storage itself is still called Google Drive, but Google One also offers side-effects: You can share the storage quota with five family members as part of the new Family Plan. Another new feature is free access to live experts to help with any consumer products and services Google (Google has already offered 24/7 support to G Suite customers). In the U.S., support is available 24 hours in 7 by chat, email and phone. In other countries, support options vary. Other benefits include credits in the Google Play store and hotel offers. Plans start at 1.59 euros/\$1.99 per month for 100GB Plans go up to 7.99 euros / \$9.99 for 2TB Google One Storage 15GB is free for those who are glistened. You can then pay a small monthly fee to increase this storage if you need more. If you need to update this repository, Google One has various paid plans available. They start as low as 1.99 pounds per month in the UK, \$1.99 in the US for 100GB. If that's not enough, you can pay 2.49 euros/\$2.99 per month for 200GB of storage. 2TB storage for 7.99 pounds per month in the UK, \$9.99 in the US. Note: Google Drive is built into Chromebooks. And if you have certain Chromebook models, you'll get 100GB of free storage in two years rather than basic 15GB of memory allocation. See Pocket-lint's Chromebook tips and tricks here. Google One is currently available in the US, UK and many other countries too. Click here to subscribe to updates or access. If you want to know more, check out the Google Drive website or contact the Driving Assistance Center or Google Drive Help Forum. Written by Maggie Tillman. Editing by Adrian Inginga

Google Drive is an extremely popular cloud storage service that allows you to store different files in the cloud and then access them from your smartphone, tablet or computer. It comes preinstalled on most new Android phones, and you already have an account if you've ever used Gmail. It's powerful and easy to use, but if you're new to cloud storage and have never used competitors like Dropbox or Box, this can be a bit overwhelming. To help, we've put together this beginner's guide on how to use Google Drive. Feel free to use jump links to go to the most relevant part for you. If you don't have it on your phone yet, and tap the download buttons below to download the app for Android or iOS. Download Drive for Android What is Google Drive? How does it work? We won't be too technically here, but Google Drive is Google's cloud storage solution. This allows you to store your media and documents on Google servers so you can make room on your hard drive and access them from almost any internet-connected device. Before you dive into all the features and show you how to use Google Drive, let's talk about a few basic things you need to know. First, you need a Google account to use this service. It's free and can be set up in minutes. The account gives you access to all Google services, including Drive, Gmail, Photos, YouTube, Play Store and so on. You can access Drive online, [headline drive.google.com](https://drive.google.com) or through the free Android app. You can also view all the files through the Drive folder on your computer from Google Drive to your desktop, but you need to download the software first. Read next: How to customize and use a new tool to back up and sync GoogleY can get the software by visiting the Drive website. From here you click on the cog settings in the top right version and then get a drive for the desktop. Follow the installation instructions and then just run the program and go through the customization process, after which you will see the icon Drive under the Favorites tab on Windows. Google Drive Pricing When it comes to storage, you get 15GB for free, which is shared between drive, Gmail and photos. This is enough for most people, but you can add more for a monthly or annual subscription fee. This subscription is now called Google One, and gives additional benefits for just more memory, like discounts in the Google Store and extra users for families. We're just focusing on Drive pricing here, so let's take a look at raw storage. A 100GB plan will set you back \$2 a month, 1TB goes for \$10 a month, while 10 TB costs \$100 a month. READ ALSO: Google One vs. Competitors: Dropbox, OneDrive, iCloud and more Types of Supported Files Storage Space is a major issue for most cloud storage solutions, but file-type restrictions can also be significant for many users. Fortunately, Google Drive supports a ton of file types including jpeg, png, gif, mpeg4, mov and avi - see the full list here. There are also limits on the size of files, but they won't cause problems for most users: Documents: Up to 1.02 million characters. If you convert a text document into a Google Docs format, it can be up to 50MB. Tables: Up to two million spreadsheet cells that are created or converted to Google Sheets. Presentations: Up to 100 MB for presentations converted to Google Slides. All other files: up to 5TB. That's all for our primer on the fact that Google Drive has some basic things you need to know before you start. Now that we've got that out of the way, let's see how to use Google Drive. How to download and download Google Drive files? In order to access files on Google Drive, you first need to download them online, PC, or mobile. First, we'll talk about a web client where there are two ways to download files to Drive. The first is the drag method: select the file you want to download from your computer, drag it to the drive in the browser window, and drop it. This works for both individual files and folders. The second option is to press the new button in the top left corner of the website and either choose to download the file or download Folder (image above). Then select the files or folders you want to download, click on Open or Upload, and you're good to go. An even easier way to load on Google's cloud server is to use Google Drive for your desktop. Just drag the documents you want to download and put them in the Drive folder. This basically works just like transferring files from one folder to another on your computer, although it may take some time for files to sync. Downloading files from a mobile device is equally simple. Open the Drive app, tap the q icon in the bottom right corner and select the file you want to send to the cloud. You can also quickly download files by opening them by clicking the Share button and then save the Drive. Downloading files from Google Drive are also fast and easy on any device with an Internet connection. If you use Google Drive for your desktop, everything you download can be copied to any other folder on your computer, like any other file. You can also download files from clicking the right button and clicking Download. This works for individual files as well as entire folders. On mobile devices it may be more convenient to leave files in the cloud and just open them when you need them, but there are some situations where you will need to find that that The Drive download button. All you have to do is find the file in the app, click the three dots on the right, then download and you're good to go. How do I organize and delete files on Google Drive? You can organize files in the Drive just like you would on your computer. You can leave them all in one place (My drive) or put them in different folders. To create a folder in a web client, click on a new button and then select Folder. You can also click the right button in the Drive folder on your computer and create a new folder, as you would normally be on Windows. On your mobile phone, tap the blue button and select Folder, as shown in the screenshots below. To move files to a folder on the Internet, just use the drag method for the web client and the Drive folder. It also works on a mobile phone, but in my experience, it's faster if you hit the more action icon (three vertical dots) next to the file, select the Move option and then choose a new location for the file. How do I delete Drive files? Because the storage space in the cloud is premium, it's important to know how to remove Drive files to clear the space. The easiest option on the internet is to select a file or folder and press the deletion key on the keyboard. This works for both the web client and the Drive folder. To remove the Drive document from your mobile device, tap the more action icon next to the file (three vertical points) and select Remove. How to share files on Google Drive? One of the best things about Drive is the ability to share files with others. These can be individual documents or folders. To share a file or Google Drive folder, select it and tap the Get Shareable Links icon, and then copy and share a link with the people you want. You can also click on the Exchange Settings option, where you can turn on the edit permission and send the link directly to someone's email address. This process is similar to that of mobile devices. Click the more action icon (three vertical dots) next to the file and turn on the link-sharing option. The link will be automatically copied so you can go ahead and insert it into the messaging app and send it to a friend. Alternatively, you can click on Add People to send a link to your email address. How do I use Google Drive with third-party apps? The drive is linked to Google's office performance kit, which includes Google Docs, sheets and slides that rival Word, Excel, and Microsoft PowerPoint. Although these three services have their own dedicated website, every document you create is automatically stored in Drive. Drive also supports other Google services such as Google Forms, Google Drawings and more. You can create a document directly from the Drive web interface or mobile app, which then takes you to Google Doc website. How exactly? Click on the blue New button in the top left corner of the website, then select Google Docs, Google Sheets, or Google Slides. On your mobile phone, tap the blue icon and select one of the three options mentioned in the previous sentence. No matter what which You choose, you can always access all the documents created from your computer, mobile device, and Drive folder on your computer. Google Drive also integrates with many third-party apps. These include: DocHub (PDF signing), Pixlr Express (photo editor), Draw.io (diagrams) and many others. One of the third-party apps that work with Google Drive is WhatsApp, where you can store old messages on a cloud service. In even better news, WhatsApp has made changes that allow people to store messages on Google Drive without having them count on their storage limits. You can check the full list through the web interface: click the New button and select more follow Connect more apps. When you see what you like, click Connect to integrate it with Drive. Using Gmail Drive integration One of the best and most useful integrations between Gmail and Drive. In fact, unofficial support for using Gmail for storage precedes Google Drive as a service. Fans created a program called Gmail Drive that allowed Gmail to be used as a storage environment. Obviously, once Google Drive and Drive for desktop were released Gmail Drive was no longer necessary and no longer supported. Read also: How to set up a Gmail account in less than 2 minutes to share a Drive file with Gmail, start compiling a message and tap the Drive icon at the bottom of the screen. You can then go to the file and share it. It's also an easy way to share large files that are shared in the form of links rather than attachments. It's also easy to save Gmail files for driving. Just mouse over an image or other media file and tap the Drive icon in the bottom right corner. On your mobile phone, you have to click on the image for a long time and then click View Images. Click the icon for more options (three points) in the top right option, and then save Drive. It's worth noting that the files on Gmail rely on the same storage limit as the files on the drive, so you don't actually save space that way. You do, however, make them easier to search in the Drive interface on the Internet, mobile and desktop customers. How do I use Google Drive offline? Having files online is great for

accessing them from multiple devices, but it can also mean you won't be able to see or edit them without an Internet connection. Fortunately, this is not the case with Google Drive. The service has a standalone mode that allows you to access files until you are connected to the Internet. You can view and edit files including Google Docs, sheets and slides, and all changes are automatically synchronized when an Internet connection is set. You have to enable offline access individually for each device. On your computer, open the settings menu and turn offline (image above). Also make sure to download Google Docs offline on the Chrome extension. Once this is done, you can visit the Drive website to view or edit the files. But keep in mind that you should use the Chrome browser for this to work. Of course, you can also open files through the Drive folder on your computer, which will then open in Chrome. Things are a little different on mobile devices. You have to open the Drive app, click the more action icon (three vertical points) next to the file, and then choose available offline. In addition, you can long click on the file and then choose an additional one and follow the same procedure to enable offline mode for multiple files at the same time. If you've made it this far, you should have a good idea of how to use Google Drive. The service offers a few more features, but those mentioned above are the most important of them.
